CHAPTER 3

Analysis of the Internal Environment

Management of Strategy

Concepts and Cases

Michael A. Hitt • R. Duane Ireland • Robert E. Hoskisson
Knowledge Objectives

Studying this chapter should provide you with the strategic management knowledge needed to:

1. Explain the need for firms to study and understand their internal environment.
2. Define value and discuss its importance.
3. Describe the differences between tangible and intangible resources.
4. Define capabilities and discuss how they are developed.
5. Describe four criteria used to determine whether resources and capabilities are core competencies.
Knowledge Objectives (cont’d)

Studying this chapter should provide you with the strategic management knowledge needed to:

6. Explain how value chain analysis is used to identify and evaluate resources and capabilities.

7. Define outsourcing and discuss the reasons for its use.

8. Discuss the importance of identifying internal strengths and weaknesses.
Competitive Advantage

• Firms achieve strategic competitiveness and earn above-average returns when their core competencies are effectively:
  ➢ Acquired.
  ➢ Bundled.
  ➢ Leveraged.

• Over time, the benefits of any value-creating strategy can be duplicated by competitors.
Competitive Advantage (cont’d)

• **Sustainability of a competitive advantage** is a function of:
  
  ➢ **The rate of core competence obsolescence** due to environmental changes.
  
  ➢ **The availability of substitutes** for the core competence.
  
  ➢ **The difficulty competitors** have in duplicating or imitating the core competence.
By studying the external environment, firms identify what they might choose to do.
The Context of Internal Analysis

• **Global Economy**
  - Traditional sources of advantages can be overcome by competitors’ international strategies and by the flow of resources throughout the global economy.

• **Global Mind-Set**
  - The ability to study an internal environment in ways that are not dependent on the assumptions of a single country, culture, or context.

• **Analysis Outcome**
  - Understanding how to leverage the firm’s bundle of heterogeneous resources and capabilities.
Components of Internal Analysis Leading to Competitive Advantage and Strategic Competitiveness

- Discovering Core Competencies
  - Core Competencies
  - Capabilities
  - Resources
    - Tangible
    - Intangible
  - Four Criteria of Sustainable Advantages
    - Valuable
    - Rare
    - Costly to imitate
    - Nonsubstitutable
  - Value Chain Analysis
    - Outsource

- Competitive Advantage
- Strategic Competitiveness
Creating Value

• By exploiting their core competencies or competitive advantages, firms create value.

• Value is measured by:
  ➢ Product performance characteristics
  ➢ Product attributes for which customers are willing to pay

• Firms create value by innovatively bundling and leveraging their resources and capabilities.

• Superior value → Above-average returns
Creating Competitive Advantage

• Core competencies, in combination with product-market positions, are the firm’s most important sources of competitive advantage.

• Core competencies of a firm, in addition to its analysis of its general, industry, and competitor environments, should drive its selection of strategies.
The Challenge of Internal Analysis

• Strategic decisions in terms of the firm’s resources, capabilities, and core competencies:
  ➢ Are non-routine.
  ➢ Have ethical implications.
  ➢ Significantly influence the firm’s ability to earn above-average returns.
The Challenge of Internal Analysis (cont’d)

• To develop and use core competencies, managers must have:
  - Courage
  - Self-confidence
  - Integrity
  - The capacity to deal with uncertainty and complexity
  - A willingness to hold people (and themselves) accountable for their work
FIGURE 3.2

Conditions Affecting Managerial Decisions about Resources, Capabilities, and Core Competencies

- **Uncertainty**: regarding characteristics of the general and the industry environments, competitors’ actions, and customers’ preferences.

- **Complexity**: regarding the interrelated causes shaping a firm’s environments and perceptions of the environments.

- **Intraorganizational Conflicts**: among people making managerial decisions and those affected by them.

Resources, Capabilities and Core Competencies

- **Resources**
  - Are the source of a firm’s capabilities.
  - Are broad in scope.
  - Cover a spectrum of individual, social and organizational phenomena.
  - Alone, do not yield a competitive advantage.
Resources

• Resources
  ➢ Are a firm’s assets, including people and the value of its brand name.
  ➢ Represent inputs into a firm’s production process, such as:
    • Capital equipment
    • Skills of employees
    • Brand names
    • Financial resources
    • Talented managers

• Types of Resources
  ➢ Tangible resources
    • Financial resources
    • Physical resources
    • Technological resources
    • Organizational resources
  ➢ Intangible resources
    • Human resources
    • Innovation resources
    • Reputation resources
<table>
<thead>
<tr>
<th>TABLE 3.1</th>
<th>Tangible Resources</th>
</tr>
</thead>
</table>

**Financial Resources**
- The firm’s borrowing capacity
- The firm’s ability to generate internal funds

**Organizational Resources**
- The firm’s formal reporting structure and its formal planning, controlling, and coordinating systems

**Physical Resources**
- Sophistication and location of a firm’s plant and equipment
- Access to raw materials

**Technological Resources**
- Stock of technology, such as patents, trademarks, copyrights, and trade secrets

# Intangible Resources

</tr>
</tbody>
</table>

Resources, Capabilities and Core Competencies

• Capabilities

- Represent the capacity to deploy resources that have been purposely integrated to achieve a desired end state
- Emerge over time through complex interactions among tangible and intangible resources
- Often are based on developing, carrying and exchanging information and knowledge through the firm’s human capital
Resources, Capabilities and Core Competencies

- Capabilities (cont’d)
  - The foundation of many capabilities lies in:
    - The unique skills and knowledge of a firm’s employees
    - The functional expertise of those employees
  - Capabilities are often developed in specific functional areas or as part of a functional area.
<table>

</table>
Resources, Capabilities and Core Competencies

• Four criteria for determining strategic capabilities:
  ➢ Value
  ➢ Rarity
  ➢ Costly-to-imitate
  ➢ Nonsubstitutability
Resources, Capabilities and Core Competencies

- **Core Competencies**
  - Resources and capabilities that are the sources of a firm’s competitive advantage:
    - Distinguish a company competitively and reflect its personality.
    - Emerge over time through an organizational process of accumulating and learning how to deploy different resources and capabilities.
Resources, Capabilities and Core Competencies

- **Core Competencies**
  - Activities that a firm performs especially well compared to competitors.
  - Activities through which the firm adds unique value to its goods or services over a long period of time.
Building Core Competencies

Discovering Core Competencies

Four Criteria of Sustainable Advantage

- Valuable capabilities
- Rare capabilities
- Costly to imitate
- Nonsubstitutable

- Four Criteria of Sustainable Competitive Advantage

Value Chain Analysis

• Allows the firm to understand the parts of its operations that create value and those that do not.

• A template that firms use to:
  - Understand their cost position.
  - Identify multiple means that might be used to facilitate implementation of a chosen business-level strategy.
Value Chain Analysis (cont’d)

• Primary activities involved with:
  - A product’s physical creation
  - A product’s sale and distribution to buyers
  - The product’s service after the sale

• Support Activities
  - Provide the assistance necessary for the primary activities to take place.
Value Chain Analysis (cont’d)

• Value Chain
  - Shows how a product moves from the raw-material stage to the final customer.

• To be a source of competitive advantage, a resource or capability must allow the firm:
  - To perform an activity in a manner that is superior to the way competitors perform it, or
  - To perform a value-creating activity that competitors cannot complete
FIGURE 3.3
The Basic Value Chain

</thead>
</table>

| Service | Activities designed to enhance or maintain a product’s value. Firms engage in a range of service-related activities, including installation, repair, training, and adjustment. |

*Each activity should be examined relative to competitors’ abilities. Accordingly, firms rate each activity as superior, equivalent, or inferior.*

© 2007 Thomson/South-Western. All rights reserved.
Table 3.7
Examining the Value-Creating Potential of Support Activities

**Procurement**
Activities completed to purchase the inputs needed to produce a firm’s products. Purchased inputs include items fully consumed during the manufacture of products (e.g., raw materials and supplies, as well as fixed assets—machinery, laboratory equipment, office equipment, and buildings).

**Technological Development**
Activities completed to improve a firm’s product and the processes used to manufacture it. Technological development takes many forms, such as process equipment, basic research and product design, and servicing procedures.

**Human Resource Management**
Activities involved with recruiting, hiring, training, developing, and compensating all personnel.

**Firm Infrastructure**
Firm infrastructure includes activities such as general management, planning, finance, accounting, legal support, and governmental relations that are required to support the work of the entire value chain. Through its infrastructure, the firm strives to effectively and consistently identify external opportunities and threats, identify resources and capabilities, and support core competencies.

Each activity should be examined relative to competitors’ abilities. Accordingly, firms rate each activity as **superior**, **equivalent**, or **inferior**.

Porter, pp. 40–43, Copyright © 1985, 1998 by Michael E. Porter. © 2007 Thomson/South-Western. All rights reserved.
The Value-Creating Potential of Primary Activities

• Inbound Logistics
  ➢ Activities used to receive, store, and disseminate inputs to a product

• Operations
  ➢ Activities necessary to convert the inputs provided by inbound logistics into final product form

• Outbound Logistics
  ➢ Activities involved with collecting, storing, and physically distributing the product to customers
The Value-Creating Potential of Primary Activities (cont’d)

• Marketing and Sales
  ➢ Activities completed to provide the means through which customers can purchase products and to induce them to do so.

• Service
  ➢ Activities designed to enhance or maintain a product’s value

• Each activity should be examined relative to competitor’s abilities and rated as superior, equivalent or inferior.
The Value-Creating Potential of Primary Activities: Support

• Procurement
  ➢ Activities completed to purchase the inputs needed to produce a firm’s products.

• Technological Development
  ➢ Activities completed to improve a firm’s product and the processes used to manufacture it.

• Human Resource Management
  ➢ Activities involved with recruiting, hiring, training, developing, and compensating all personnel.
The Value-Creating Potential of Primary Activities: Support (cont’d)

- Firm Infrastructure
  - Activities that support the work of the entire value chain (general management, planning, finance, accounting, legal, government relations, etc.)
    - Effectively and consistently identify external opportunities and threats
    - Identify resources and capabilities
    - Support core competencies
  - Each activity should be examined relative to competitor’s abilities and rated as superior, equivalent or inferior.
Prominent Applications of the Internet in the Value Chain

**Firm Infrastructure**
- Web-based, distributed financial and ERP systems
- Online investor relations (e.g., information dissemination, broadcast conference calls)

**Human Resource Management**
- Self-service personnel and benefits administration
- Web-based training
- Internet-based sharing and dissemination of company information
- Electronic time and expense reporting

**Technology Development**
- Collaborative product design across locations and among multiple value-system participants
- Knowledge directories accessible from all parts of the organization
- Real-time access by R&D to online sales and service information

**Procurement**
- Internet-enabled demand planning, real-time available-to-promise/capable-to-promise and fulfillment
- Other linkage of purchase, inventory, and forecasting systems with suppliers
- Automated "requisition to pay"
- Direct and indirect procurement via marketplaces, exchanges, auctions, and buyer-seller matching

---

**Inbound Logistics**
- Real-time integrated scheduling, shipping, warehouse management, demand management, and planning, and advanced planning and scheduling across the company and its suppliers
- Dissemination throughout the company of real-time inbound and in-progress inventory data

**Operations**
- Integrated information exchange, scheduling and decision making in in-house plants, contract assemblers, and component suppliers
- Real-time available-to-promise and capable-to-promise information available to the sales force and channel

**Outbound Logistics**
- Real-time transaction of orders whether initiated by an end consumer, a salesperson, or a channel partner
- Automated customer-specific agreements and contract terms
- Customer and channel access to product development and delivery status
- Collaborative integration with customer forecasting systems
- Integrated channel management including information exchange, warranty claims, and contract management (process control)

---

**Marketing and Sales**
- Online sales channels including websites and marketplaces
- Real-time insights into customer information, product catalog, dynamic pricing, inventory availability, online submission of quotes, and order entry
- Online product configurators
- Customer-tailored marketing via customer profiling and promotion response tracking

**After-Sales Service**
- Online support of customer service representatives through e-mail, Web chats, and other uses of video streaming
- Customer self-service via websites and intelligent service request processing including updates to billing and shipping profiles
- Real-time field service access to customer account review, schematic review, parts availability and ordering, work-order update, and service parts management

---

Outsourcing

- The purchase of a value-creating activity from an external supplier
  - Few organizations possess the resources and capabilities required to achieve competitive superiority in all primary and support activities.
- By performing fewer capabilities:
  - A firm can concentrate on those areas in which it can create value.
  - Specialty suppliers can perform outsourced capabilities more efficiently.
Outsourcing Decisions

A firm may outsource all or only part of one or more primary and/or support activities.

Primary Activities:
- Marketing and Sales
- Operations
- Inbound Logistics
- Outbound Logistics
- Service

Support Activities:
- Firm Infrastructure
- Human Resource Mgmt.
- Technological Development
- Procurement

Margin
Strategic Rationales for Outsourcing

• Improving business focus
  ➢ Helps a company focus on broader business issues by having outside experts handle various operational details.

• Providing access to world-class capabilities
  ➢ The specialized resources of outsourcing providers makes world-class capabilities available to firms in a wide range of applications.
Strategic Rationales for Outsourcing (cont’d)

• **Accelerating re-engineering benefits**
  - Achieves re-engineering benefits more quickly by having outsiders—who have already achieved world-class standards—take over process.

• **Sharing risks**
  - Reduces investment requirements and makes firm more flexible, dynamic and better able to adapt to changing opportunities.

• **Freeing resources for other purposes**
  - Redirects efforts from non-core activities toward those that serve customers more effectively.
Outsourcing Issues

• Seeking greatest value
  ➢ Outsource only to firms possessing a core competence in terms of performing the primary or supporting the outsourced activity.

• Evaluating resources and capabilities
  ➢ Do not outsource activities in which the firm itself can create and capture value.

• Environmental threats and ongoing tasks
  ➢ Do not outsource primary and support activities that are used to neutralize environmental threats or to complete necessary ongoing organizational tasks.
Outsourcing Issues (cont’d)

• Nonstrategic team resources
  ➢ Do not outsource capabilities critical to the firm’s success, even though the capabilities are not actual sources of competitive advantage.

• Firm’s knowledge base
  ➢ Do not outsource activities that stimulate the development of new capabilities and competencies.
Cautions and Reminders

• Never take for granted that core competencies will continue to provide a source of competitive advantage.

• All core competencies have the potential to become core rigidities—former core competencies that now generate inertia and stifle innovation.

• Determining what the firm can do through continuous and effective analyses of its internal environment will increase the likelihood of long-term competitive success.
